

Spot Color, MICR and Blazing Fast Booklets

Digital Document Publishers from Ricoh Printing Systems America

DDP 70e with Publishing Finisher

DDP 92 with Booklet Maker

DDP 184 with Booklet Maker

Savings

Ricoh printing systems are designed to save you money. A small equipment footprint and an affordable Total Cost of Ownership are just the beginning. And DDP production printers can reduce your delivery time, eliminate warehousing and excess printing costs.

Input

On demand printing and variable data capabilities let you produce customized, high volume output with minimal set-up effort. Each printer model has three input trays, a high capacity feeder and a manual bypass tray that provide flexibility when handling special media.

Throughput

DDP smart paper path provides maximum printer performance. Some printers come to a complete stop before switching modes or input sources, but DDP technology keeps print jobs running at full speed.

- Lock in duplex mode for simplex and duplex pages within the same job to avoid slower printing speeds.
- Select from mixed paper trays within the same job without decreasing speed.
- Select different paper sizes within the same job without decreasing speed.
- Program multiple paper tray cascade paths to emulate legacy printers.

Output

Edge-to-edge printing and fully adjustable trays that support paper sizes up to 12" x 18" are available so you can cover any layout. Produce saddle-stitched booklets at speeds up to six booklets per minute.

Uptime

If you support a 24 x 7 operation DDP production printers won't let you down. With operator replaceable consumables you don't have to wait for a service technician. An operator can change the black and color toner and developer, the fuser and even the photoconductor drum at any time.

Applications

DDP printers are complemented by software solutions that include the *Enhance Productivity Package*, e-forms and legacy data stream conversion. Spot Color and MICR options available with the DDP 184 expand the monochrome applications supported by the DDP 70e and DDP 92. Transactional printing of invoices, financial statements and reports is improved with spot color for clarity and emphasis. MICR applications provide efficient ways to comply with printing requirements for *The Check Clearing for the 21st Century Act (Check 21)* and *Image Replacement Documents*.

Whether you print 600,000 impressions or 1,600,000 impressions per month, Ricoh has the printing system for you today.
